

Year 1

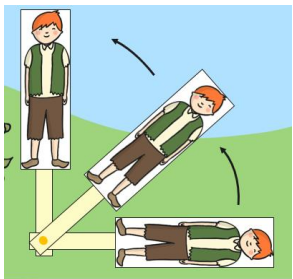

Design Technology Levers and Sliders

Mechanism- components acting together to make an action take place.

Slider- moves backwards and forwards along a straight line.

Lever- a bar which turns around a point/pivot.

| | | |
|-------------------|----------------------|----------------------|
| slider | force | mechanism |
| fasten | position | push |
| pull | direction | lever |

Words you will need...

| | | |
|----------------------|---------------------|---------------------|
| pivot | movement | forwards |
| backwards | left | right |
| handle | fold | slide |
